Professional Summary

I combine strong content operations discipline (planning, templates, QA, documentation) with a technical mindset (HTML/CSS, Git, debugging). Used to shipping at scale and improving processes to reduce errors and turnaround time. Excited to apply this to CRM channels (email/WhatsApp/SMS) and grow into lifecycle marketing.

Skills

CRM / Content Ops:

- Content planning & calendars (monthly/weekly planning)
- Workflow ownership: briefs → production → QA → release
- Template systems & reusable content modules
- Quality assurance: checklists, cross-channel consistency, regression checks
- Documentation (playbooks, onboarding guides, SOPs)
- Strong written communication (RU/EN), stakeholder collaboration

Technical:

- HTML/CSS (incl. responsive layouts), basic JS/TS
- Git & PR workflow, debugging, issue reproduction
- Ability to ramp up quickly on new tools (e.g., [Customer.io](#))
- HTML email basics (templates, QA across clients), responsive CSS constraints

Languages

Russian: Native

English: Upper-Intermediate (B2+)

Serbian: Elementary Proficiency (A1)

Professional Experience

Content Operations Specialist

Tinkoff Journal (Aug 2024 — Present)

Owned end-to-end content production workflow in a high-volume environment: from incoming requests and content preparation to final release.

- Supported a publishing pipeline of ~140 pieces/month with consistent QA and

predictable release cadence.

- Reduced rework on complex long-form pages by standardizing reusable patterns and pre-release checks (up to ~50% on common cases).
- Improved turnaround time for repeatable formats by optimizing templates and workflows (~20% on average flow).

Markup Developer at Tinkoff Journal – biggest financial & lifestyle media in Eastern Europe

(Aug 2023 — Aug 2024)

Built a library of reusable, regression-tested CMS components that increased layout delivery speed by ~20% and eliminated a recurring class of production bugs.

- Overhauled the Google Docs-to-CMS import process by designing a structured data format, cutting rework from editorial changes by over 50%.
- Created the team's first pre-release checklist and comprehensive onboarding documentation, which cut new hire ramp-up time and significantly reduced deployment-related errors.

Certificates & Professional Development

Advanced TypeScript — Hexlet.io (Nov 2024 — Feb 2025)

Web Developer ~720h — Yandex Practicum (Jan 2023 — Nov 2023)

Responsive Web Design — freeCodeCamp (Jul 2022 — Nov 2022)

Projects

Admin Dashboard MVP

Tech Stack: Next.js, React, TypeScript, Redux Toolkit / RTK Query, Tailwind CSS, Charts, i18n

Dashboard-style web app focused on complex UI states (tables, charts, filters) and clean state management.

- Built UI with reusable components and clear state handling; focused on UI consistency, edge cases, and maintainability.
- Implemented API data layer with RTK Query (caching, consistent request handling) and localization (i18n).

Stripe Mini App

Tech Stack: Next.js App Router, React, TypeScript, Stripe (Checkout + Webhooks), Tailwind, shadcn/ui, Zod, Playwright/Vitest

Compact e-commerce demo: live product catalog from Stripe Products/Prices, cart → Checkout → success timeline.

- Implemented a small product flow with clear user states and event-driven logic (e.g., success/failure paths), focusing on predictable UI behavior and QA.
- Practiced clean component structure and maintainable code to support iteration and scale.

Kanban Board App

Tech Stack: Next.js, React, TypeScript, Redux Toolkit, Firebase, dnd-kit, Vitest

Real-time collaborative Kanban board with authentication, roles, and drag-and-drop interactions.

- Implemented boards/columns/cards CRUD with drag-and-drop and optimistic UI updates, synced via Firestore listeners.
- Added collaboration & security: roles (owner/editor/viewer), email invites, protected operations via Firebase Admin SDK; tests with Vitest (incl. Firestore rules via emulator).
