

Spontaneous Application — Junior Frontend (Remote)

12 Feb 2026 • Horizon Trading Solutions

Hello Horizon Trading Solutions team,

I'm applying via your "Spontaneous Application" posting because I didn't see a junior front-end opening right now, but I'm genuinely interested in the kind of product you're building — a trading platform with an ambitious roadmap (AI/ML, crypto, low latency).

Right now I work as a **markup developer (HTML/CSS)** in a CMS environment, collaborating closely with designers and stakeholders and shipping content-heavy pages with careful QA. At the same time, I'm intentionally making the transition into a **Junior Frontend Developer** role: I have a strong base in JavaScript and I'm actively building hands-on skills in React/TypeScript through projects and structured learning.

What I can bring on day one:

- reliable UI delivery from Figma to clean, maintainable markup
- strong attention to detail (layout stability, responsive behavior, cross-browser checks)
- a QA mindset: I test, I document, I don't "ship and pray"
- clear async communication (I'm used to remote work and deadlines)

What I'm looking for:

- 100% remote role (I'm based in Serbia, CET)
- a product team where I can grow into deeper React/TypeScript work over time
- I'm comfortable starting at a junior level and I'm open to a minimal starting rate / paid trial period to prove value quickly (with a clear review milestone after ramp-up)

If this could fit any upcoming needs (engineering, product UI, internal tools), I'd love to chat. Thank you for considering my application.

Best regards,

Evgenii Rubin

Novi Sad, Serbia (CET)
